

Abstract

Title: The analysis of interest in cross-country skiing during the coronavirus crisis

Objectives: The aim of this thesis is to analyze the visitors of cross-country skiing in Bedřichov, located in the Jizera Mountains, during the Covid-19 crisis.

Methods: The main source of information for this thesis was acquired through a questionnaire form completed by the residents of Bedřichov Village in the Jizera mountains. The results revealed the coronavirus impact on the interest in cross country skiing.

Results: Based on the questionnaire responses, an analysis of data was conducted from which an overview of individual questionnaire items was created. The overview results assisted in evaluating and verifying a total of 4 hypotheses previously established. 15 respondents participated in this process and their responses helped to verify such hypotheses.

Conclusion: The results of analysis data confirmed all established hypotheses. The main hypothesis was also confirmed, that is the interest in cross-country skiing had increased during coronavirus crisis due to the government measures.

Keywords: cross country skiing, Covid-19, Bedřichov, public interest
